

# Hugyfot housing for **Nikon D70**

50 years of pionering from Hugyfot has become a renewed injection by a joined venture with Green Force, the most advanced divetorche makers in the world. The Hugyfot housings are now build according to the latest CAD/CAM techniques by Green Force. This CNC driven production guarantees an, on this market, unseen precision resulting in a superior quality of materials used against standard prices.

René Hugenschmidt is admired and envied by the competition, because his housings are inventive, extremely beautiful and the design is above all functional. Green Force will continue his work from January 1st 2004 and will guarantee that the Hugyfot-line and philosophy will be continued in the future.

The second guarantee the Hugyfot customers have is the worldwide network of distributors and dealers. In this way they can always

rely on the best service and support. All aspects which have made Hugyfot exceptional have been implemented. Round curves, easy to handle, "One hand" operatable. No concessions on quality, no concessions on design.

Look and enjoy.

Functions are: On/Off, Sensitive Shutter Release, Shutter Speed, Aperture, Zoom, Display, Menu, Central Control Buttons. The housing can be used with a flat-port for the 28-80 zoom objective. Dome- and macro-port, for wide angle and macro objectives, are also available. Nikonos flash connection and a handle are available.

## Technical Data of the Housing

Name: HFN D70  
 B x H x D: 208 x 160 x 125 mm  
 Weight: 1.950 g (without camera)  
 0 g (under water with camera)  
 Material: Aluminum (AlMgSi1)  
 Color: Grey  
 Depth: 80 m (265 ft) tested
