

Steady Tray for GoPro

Say goodbye to shaky photos and videos.

Is your GoPro footage inducing motion sickness? Let's be honest, there's only so much post-editing work you can do to correct the unavoidable outcome of shaky video. Share your underwater footage with confidence by simply adding this lightweight, precision-machined aluminum tray to your GoPro camera.

Designed for optimal results.

While light will improve footage taken in shallow water, it's a must-have the deeper you go. At only 30 feet below the surface, red, orange, violet, and yellow are lost. At 60-120 feet, you're left with only blue and green. In order to bring the truly vibrant colors of the underwater world to life, Steady Tray for GoPro encompasses two mounting points, designed to meet both your comfort and lighting needs.

Hand crafted with care.

Like every Ikelite product, Steady Tray for GoPro is built and tested in the USA. Premium anodizing delivers rugged, corrosion resistant performance. Best of all, we back our products with over 50 years of experience and service within the dive industry.

At your local dive store now.
