T-HOUSING

H8ENERGY power bank and charging adapter for Hero 8

This adapter triples the battery capacity of your Hero 8 and also serves as a charging cradle. Equipped with two original GoPro batteries (not included), the H8ENERGY adapter is simply plugged onto the Hero 8 and supplies it with the additional energy.

The integrated USB-C charging socket can be used to charge the two batteries used in stand-alone operation, as well as the battery in the Hero8 when docked.

The scope of delivery includes a skeleton frame that can be mounted on standard GoPro mounts.

Please note that no batteries are included and the Hero 8 with the docked adapter is no longer waterproof. For use under water, we recommend our T-HOUSING H8ENERGY aluminum housing.

The illustrated camera and other accessories are NOT included.
