The *new* SeaLife Micro HD

Introducing the world's first permanently sealed underwater camera

The new [Micro HD](#) has no doors or openings, no O-rings, and no maintenance - and it never leaks. With colorful 13MP still images, full 1080p HD video, instant focusing, and a built-in 140-degree Fisheye Lens, the Micro HD provides everything needed to capture and share your underwater encounters down to 200 feet/60 meters.

Permanently Sealed

The Micro HD is permanently sealed and flood-proof. No need for removable batteries, memory cards, or O-rings.

The internal lithium-ion battery lasts for 3+hours. Easily charge the camera and transfer images/videos through the waterproof USB port.

Small and Ergonomic

Large, "Piano Key" controls make the camera easy to operate underwater, even while wearing dive gloves. And at only 4-inches wide, it's small enough to fit in a pocket yet still comfortable in hand.

Easy to Expand

Get even more color out of your shots by easily expanding the Micro HD camera with one or two Sea Dragon Lights and Flex-Connect Trays, Grips, Arms and accessories.

The [Micro HD+ Sea Dragon Pro set](#) includes the camera, Sea Dragon 2000 lumen light, Flex-Connect Micro Tray, Grip and travel case.

Sharing made simple

The camera is available in two models: the [standard 16GB Micro HD](#) and the [32GB Micro HD+ with WiFi](#). The Micro HD+ can wirelessly download and share images and video to smartphones and tablets - perfect for

backing up and sharing your photos and videos immediately after a dive or during a vacation.

The **Micro HD** underwater camera will be available at SeaLife dealers starting in September. Visit the [SeaLife website](#) and [Facebook page](#) for the latest updates!

[View our online brochure](#) for even more details on the new Micro HD and Micro HD+ cameras.
